Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

docket@hittgaines.com

Application No. Applicant(s) 10/665,607 CHAMBERS ET AL. Office Action Summary Examiner Art Unit ANDREW WENDELL 2618 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 26 February 2009. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-5.7-15 and 17-22 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) _____ is/are allowed. 6) Claim(s) 1-5,7-15 and 17-22 is/are rejected. 7) Claim(s) _____ is/are objected to. 8) Claim(s) _____ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 5) Notice of Informal Patent Application

Art Unit: 2618

DETAILED ACTION

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1, 4-5, 8, 11, 14-15, 18, and 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aarnio (US Pat Appl# 2003/0087650) in view of Henderson (US Pat# 7,266,186).

Regarding claim 1, Aarnio teaches a mobile telephone having a camera configured to generate an image of a document containing the contact data (location information is one form of contact data[sections 0006 and 0016] or even retail information is another form of contact data [section 0023]) in a first format that contains the data (digital image data, Sections 0006 and 0016 and 3.4 of Fig. 3); a processing server configured to receive the image via a wireless communication network, process the image to recognize the contact data with an image processing system, extract the contact data from the image and arrange the data according to a second format (mobile telephone sends image to mobile network 14 which extracts data and sends back to mobile telephone in a TXT, display image, audible message, etc. [Sections 0006-0008 and 0016-0018]; and a specific contact database in the mobile telephone, associated with the processing server, that receives and stores the extracted contact data according to the second format, wherein the second format is different from the first

Art Unit: 2618

format and is consistent with the specific contact database so that the extracted contact data can easily be added to the specific contact database (the contact is stored in the phone in order to for the user to view/hear the information, Sections 0006-0008 0016-0018, and 0023). Aarnio fails to teach a user can easily make a call on the mobile telephone using the added extracted contact data.

Henderson teaches that the extracted contact data can easily be added to the specific contact database and a user can easily make a call on the mobile telephone using the added extracted contact data (contact data [i.e. addresses, numbers, etc] is transmitted to the device and stored for easy access for the user, abstract).

Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art at the time the invention was made to incorporate a user can easily make a call on the mobile telephone using the added extracted contact data as taught by Henderson into Aarnio's automated contact data input in order to reduce time (Col. 2 lines 34-40 and Col. 3 lines 6-11).

Regarding claim 4, the combination including Aarnio teaches wherein the image processing system employs optical character recognition to extract the data from the contact image (Sections 0015-0017).

Regarding claim 5, it would be obvious that Aamio can teach a processing server employing a spelling correction system (Sections 0015-0017) since it already has an optical character recognition system and therefore a simple word processor systems having spell checking functions could do the task.

Art Unit: 2618

Regarding claim 8, the combination including Aarnio teaches wherein the wireless communication conforms to a selected one of GPRS 14 (Fig. 1).

Regarding claim 11, method claim 11 is rejected for the same reason as system claim 1 since the recited elements would perform the claimed steps.

Regarding claim 14, method claim 14 is rejected for the same reason as system claim 4 since the recited elements would perform the claimed steps.

Regarding claim 15, method claim 15 is rejected for the same reason as system claim 5 since the recited elements would perform the claimed steps.

Regarding claim 18, method claim 18 is rejected for the same reason as system claim 8 since the recited elements would perform the claimed steps.

Regarding claim 21, the combination including Aamio teaches wherein the contact data is a portion of the image (Sections 0006 and 0016).

Regarding claim 22, the combination including Aamio teaches automatically storing the data in the database format in the database of the mobile telephone (Sections 0006 and 0016-0018).

 Claims 2, 7, 9, 12, 17, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aarnio (US Pat Appl# 2003/0087650) in view of Henderson (US Pat# 7,266,186) and further in view of Yukie et al. (US Pat# 6,956,833).

Regarding claim 2, Aarnio in view of Henderson teaches the limitations in claim

1. Aarnio and Henderson fail to teach a video sequence.

Yukie teaches wherein the image comprises a video sequence (Col. 7 line 35-Col. 8 line 26).

Art Unit: 2618

Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art at the time the invention was made to incorporate a video sequence as taught by Yukie into a user can easily make a call on the mobile telephone using the added extracted contact data as taught by Henderson into Aarnio's automated contact data input in order to reduce local storage in a consumer device (Col. 2 lines 53-54).

Regarding claim 7, Yukie further teaches wherein the processing server forwards the contact data extracted from the image to a destination in accordance with received instructions (Col. 6 line 55-Col. 7 line 3).

Regarding claim 9, Yukie further teaches wherein the mobile device has a memory configured to store multiple images and transmits the multiple images to the processing server in a batch (Col. 7 lines 26-34).

Regarding claim 12, method claim 12 is rejected for the same reason as system claim 2 since the recited elements would perform the claimed steps.

Regarding claim 17, method claim 17 is rejected for the same reason as system claim 7 since the recited elements would perform the claimed steps.

Regarding claim 19, method claim 19 is rejected for the same reason as system claim 9 since the recited elements would perform the claimed steps.

 Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aarnio (US Pat Appl# 2003/0087650) in view of Henderson (US Pat# 7,266,186) and further in view of Zilliacus (US Pat Appl# 2003/0211856).

Art Unit: 2618

Regarding claim 3, Aarnio in view of Henderson teaches the limitations in claim

 Aarnio and Henderson fail to teach a telephone transmitting an image by an MMS format.

Zilliacus's system for facilitating interactive presentations using wireless messaging teaches a mobile telephone 1014 (Fig. 10) transmitting an image to the processing server 1016 (Fig. 10) by employing a selected one of an MMS "MMS" (Fig. 10).

Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art at the time the invention was made to incorporate a telephone transmitting an image by an MMS format as taught by Zilliacus into a user can easily make a call on the mobile telephone using the added extracted contact data as taught by Henderson into Aarnio's automated contact data input in order to cut costs and test new technologies (Section 0005).

Regarding claim 13, method claim 13 is rejected for the same reason as system claim 3 since the recited elements would perform the claimed steps.

 Claims 10 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aarnio (US Pat Appl# 2003/0087650) in view of Henderson (US Pat# 7,266,186) and further in view of lida (US Pat Appl# 2003/0181200).

Regarding claim 10, Aamio in view of Henderson teaches the limitations in claim

1. Aarnio and Henderson fail to teach charging the user for processing.

lida's mobile terminal with built in camera and network printing system teaches a charge system, coupled to the processing server, configured to charge a user for

Art Unit: 2618

processing of the image (Sections 0005 and 0054).

Therefore, it would have been obvious at the time of the invention to one of ordinary skill in the art at the time the invention was made to incorporate charging the user for processing as taught by lida into a user can easily make a call on the mobile telephone using the added extracted contact data as taught by Henderson into Aamio's automated contact data input in order to efficiently send image data (Section 0007).

Regarding claim 20, method claim 20 is rejected for the same reason as system claim 10 since the recited elements would perform the claimed steps.

Response to Arguments

Applicant's Remarks	Examiner's Response
"As such, Claims 1 and 11 are supported	Examiner has withdrawn the 112 rejection
by the original specification as established	because of support stated on page 8 of
above and, as a result comply with the	applicant's remarks.
requirements of 112, first paragraph.	
Accordingly, the Applicants respectfully	
request the Examiner to withdraw the 112,	
first paragraph rejection of Claims 1 and	
11 and allow issuance thereof."	
"The Applicants respectfully disagree since	Examiner believes applicant is reading
the cited portions of Aamio and Henderson	more into the claims than present. Aarnio
do not teach or suggest processing an	teaches in sections 0006-0008, 0016-
image to extract contact data from the	0018, and 0023 of the image (of the

Art Unit: 2618

image and storing the contact data in a specific contact database of a mobile telephone as recited in independent Claims 1 and 11." landmark, place, object) being extracted at the mobile network 14 and the contact (location, address, phone number, etc. can all be considered a contact unless further limited by amendments) data (the landmark data) is stored in specific (does not define how it is specific in the claims other than just using the word) contact database of the mobile phone (the contact data is transmitted to the phone and the phone stores the contact data in the memory of the phone).

not teach or suggest processing an image to extract contact data from the image and storing the contact data in a specific contact database of a mobile telephone as recited in independent Claims 1 and 11."

"As such, the cited portions of Aamio do

See above. Again, examiner suggests adding more detail in the claim (i.e. state images of business cards and the phone addresses off of the business cards are scanned and are extracted to a storage medium automatically into a phone address database which the user can access the database to make calls to the phone number off of the business card without typing the number manually etc).

Art Unit: 2618

"Henderson has not been cited to cure the above-noted deficiencies of Aarnio but to teach that extracted contact data can be easily added to a specific contact database."

Henderson is used to teach that a user can easily make a call on the mobile phone using the extracted data from another computer (Abstract). Aarnio teaches extracting data to a database of the phone as well (see above).

Conclusion

 THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANDREW WENDELL whose telephone number is (571)272-0557. The examiner can normally be reached on 7:30-5 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nay Maung can be reached on 571-272-7882. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
